## Funding Options for Research/Evaluation

Vehicle for Funding	Example	Pros	Cons
Fully grant funded	<ul> <li>Traditional research grant.</li> <li>E.g., Trillium and other Foundation grants</li> </ul>	<ul> <li>Sheridan has a strong track record in success</li> <li>Wide range of topics and grants</li> </ul>	<ul><li>Competitive</li><li>Timing doesn't always align with when we need</li></ul>
Grant leveraged with partner contribution		Partner contributions small for what they get back	<ul> <li>Restricted in eligible expenses and requirements</li> <li>Must fit our project to the mandate of the grant call</li> </ul>
Fee for Research	Direct agreement between organization and Sheridan	<ul> <li>No external funds and therefore no grant body requirements or expectations</li> <li>Organization and Sheridan have flexibility and control over topic, budget and eligible expenses</li> <li>Organization and Sheridan can determine timelines and start time to meet organization's needs</li> </ul>	<ul> <li>Sometimes more time to land agreement (e.g., liability, indemnification, etc.)</li> <li>Expectations from partner – not a consulting service agreement</li> </ul>
Ontario Ministry TPA	<ul> <li>Direct Proposal for funding consideration from relevant ministry</li> <li>Using excess TP funds</li> </ul>	<ul> <li>Organization and Sheridan have flexibility and control over topic, budget and eligible expenses</li> <li>Specific agreement with just the ministry can be shaped to meet everyone's needs, especially an area that is of particular importance to the ministry and across the sector.</li> </ul>	Process can take a long time to land and no guarantee of acceptance by the ministry to fund.
